Cyber Security - Part 2: Don't Be A KRACK Victim

I am pleased to announce that I am partnering with Jeff Stanley of eNsite Security Consulting (and former FBI agent) and Stephen Yeoh, security consultant with Un1tee, to discuss Internet issues related to protection of family assets and avoiding common banking and estate and trust planning errors.

While the Internet has simplified and enhanced our lives, this phenomenal communications platform is also fertile ground for scammers and others looking to profit from your online presence. In the second in a series on cyber security, we'll cover easy ways to guard against cyberattacks, including the latest called KRACK, which already affects everyone with Wi-Fi.

During this FREE seminar, we'll discuss:

- Understanding KRACK and how Wi-Fi technology can be used against you.
- The dos and don'ts of social media for your personal and business use.
- Current trends and scams targeting individuals and businesses.
- Convergence of physical and cyber security risks.
- Balancing convenience against risk.
- How home automation can put you at risk.
- How to protect your family assets and digital footprint.

Join us!
